

User test question

1. Change overview month.

The customer presses the “Overview –“month”” and finds the month selector. Still, he expresses wishes to install a toggle bar besides the “Overview” title to make the interface even more clear.

2. Find the budget.

The customer looks directly to the side bar and presses the “Budget” button.

3. Add income to budget

User navigates to the “+” button beside the “Income” title and presses it.

a. Set a recurring income

The customer find this part of the UX lacking. He wants this feature to be configured with a repeat every day, week, month or year options.

4. Set current budget as default

The customer find this feature useful. But after further consideration with the team, the feature is considered redundant because of the “Set recurring income/expense” function.

5. Find your various expenses and income

The user presses the “Accounting” button on the left side bar of the window.

a. Find a specific expense during one month

The user locates the “Search” feature at the top of the page and clicks it.

6. Find your scanned recipes

The costumer presses the “Receipt” button on the side bar.

7. General Feedback

- The team noticed the customer trying to press directly on the “amount” post on the “Budget” page. The team concluded that this happened because of the square boxes the “amounts” was displayed in. Therefore, we have removed the squares in MVP.
- The customer also expressed a desire to change the bar chart on the Dashboard. Here, he would like a overview of total income and total expenses usage instead of usage based on categories.
